

FRIENDS & ENEMIES In the Garden

When two people like each other, we call it "good chemistry." When two plants thrive in each other's company, gardeners call them "good companions." No one knows exactly why this is true, but companion vegetables suffer fewer pest attacks, grow more vigorously and have better yields. Sometimes they even taste better, too. Here's a look at plants that like to be together in the garden and ones that don't.
